Elixir 20/20™ Galvalume® roofing has the strength of steel with the durability of aluminum, a combination that makes **Elixir's 20/20™ Galvalume®** the very best choice for metal roofing. This along with Elixir's unique hot melt system for seams gives you a roof customers can rely on for years.

The unique building product technology offers you a product far superior to any other for cost efficiency and durability. When you're choosing a roofing material, ask yourself the tough questions: Can the material stand up to years of acid rain, sleet and everything mother nature can dish out? Will the roof look as good 20 years from now? **Elixir's 20/20™ Galvalume®** can and will!

Elixir's 20/20™ Galvalume® not only looks good and lasts longer, it has twice the heat reflectivity and efficiency of conventional roofing making interiors cooler!

Elixir's 20/20™ Galvalume® is the best choice for your roofing!!

Elixir Industries warrants to buyer that its Elixir 20/20™ hot dipped bare Galvalume® coated steel roofing sheet membrane, if erected within the continental United States, will not rupture, fail structurally, or perforate due to exposure to normal atmospheric conditions within a period of 20 years after first sold by Elixir Industries to the buyer.

This warranty DOES NOT APPLY to product exposed at any time to corrosive or aggressive conditions, including but not limited to areas:

- 1) Subject to salt water marine atmosphere or constant spraying of salt or fresh water
- 2) Subject to fallout or exposure to corrosive chemicals, ash, fumes, cement dust, or animal waste.
- 3) Subject to water run-off from lead or copper flashing or areas in metallic contact with lead or copper.
- 4) Conditions or circumstances where corrosive fumes condensates are generated or released inside the unit.
- 5) Sheltered from periodic washing from natural rain fall or man-made fresh water rinse.

This warranty DOES NOT APPLY in the event of:

- 1) Failure to provide free drainage of water, including interior condensation
- 2) Failure to remove debris from or provide for free drainage of water
- 3) Mechanical, chemical or other damage sustained during shipment, storage, forming, fabrication or erection
- 4) Damage caused to product's coating by improper scouring or cleaning procedures
- 5) Deterioration of product caused by contact with green or wet lumber
- 6) Presence of damp insulation or other corrosive material in contact with or in proximity to the product
- 7) Deterioration of product caused directly or indirectly by product contact with fasteners and/or sealants
- 8) Slopes of the finished roof, or any section of the roof that is flatter than a ratio of 0.25": 12.0"
